Work Experience

Web Developer

- A 3-month training in **front-end development at Libyan Spider**, where I honed my skills in task management and web design.
- **A web developer role at HB Company in 2023**, where I worked on several projects involving delivery, and a complete web application for Kia Company called MCU, which they use to manage their work. I learned how to create and develop APIs, build a secure dashboards, and deployment on servers.
- **A web developer and graphic designer role at Nofood PR**, a media company, in **2022**. I was the only technical person in the company, so I learned how to work independently, search and find answers, deal with clients, and negotiate with them. I worked on several web apps using Laravel and php from designing the ui to the deployment stage.
- A 5-month **training in web development at ISOM** company with Eng. Ahmed Aljazzar in **2021**, which gave me a solid foundation in web development and programming.

I am also an active volunteer, currently working as a graphic designer for various organizations such as Basera and Falyatalatf. I enjoy using my skills to contribute to social causes and help others.
